
How simulated family 1 becomes an observed input-output test
A Inputs: MAP and PETCO2 time signals (first 128 s)
Standardized input
Time (s)
MAP
PETCO2
B Output: clean and observed CBFV (first 128 s)
CBFV (simulation units)
Time (s)
Clean CBFV
Observed CBFV
C Inputs: MAP and PETCO2 power spectra
Power spectral density
Frequency (Hz)
MAP
PETCO2
D Output: clean and observed CBFV power spectra
Power spectral density
Frequency (Hz)
Clean CBFV
Observed CBFV
E Input -> output: known pathway contributions
Pathway contribution to CBFV
Time (s)
MAP -> CBFV contribution
PETCO2 -> CBFV contribution
F Input <-> input: target vs. realized coherence
MAP-PETCO2 input coherence
Frequency (Hz)
Target
Realized
